

Each year, about **20,000** children under 5 years old are hospitalized from flu-related complications.

In the US, between October 2004 and September 2015, **1,272** children under 18 years old died from flu-related complications.

84% of children who died from flu-related complications (2004-2012) had not been fully vaccinated.

Even one child dying from the flu is too many... **DON'T HESITATE...VACCINATE**

DOES YOUR CHILD NEED TWO DOSES?

**2
DOSES**

Some children 6 months through 8 years of age may require **two doses** of flu vaccine in order to be fully protected. For more information visit:

www.cdc.gov/flu/protect/children.htm.

If your child hasn't already been vaccinated, now is the time! It can take up to two weeks to build immunity—get your child vaccinated as early as possible to make sure they're protected **before** flu activity peaks.

It can take up to two weeks to build immunity against the flu

Influenza Vaccination Coverage by Age Group*

We're close to reaching US public health goals, but there's still work to be done to make sure all children and teens are protected.
